Fleet management guide

For public sector
organisations

Find out more: www.r2conline.com or call 01144 938 217

We understand the enormous challenges associated with maintaining fleet whatever the size. Digitalisation and streamlining processes are being introduced at pace, whilst staff have transitioned to remote working, this new acceptance of digital amongst public sector leaders, and barriers to transformation have been stripped away.

Our short guide below provides useful tips to help save you time when choosing a fleet management solution for your public sector organisation.

1 PICK FLEET MANAGEMENT SOFTWARE WITH NO NONSENSE CHARGING.

With pressure on public sector budgets showing little signs of easing, getting IT-investments approved can be a next-to-impossible task. This is exactly what our first tip addresses.

Pick a fleet management software solution that comes as a monthly subscription, rather than a budget-draining upfront cost. Always check for hidden charges that can appear further down the line.

[The r2c fleet/workshop management platform](#), already trusted by a number of public sector organisations, doesn't require a full upfront payment. On top of that, with the r2c products constantly evolving, you benefit from regular system updates at no extra charge.

2 DO MORE WITH LESS TIME.

Do more with less, be where and when you're needed the most with your fleet operations under control.

Public sector fleets are critical to operational delivery and front line services. Being the lifeblood of our communities, they should always remain safe, compliant and available whenever needed.

Our fleet management solutions streamline your fleet operations, mitigating the risk of unplanned downtime and compliant issues. [Our cloud-based platform](#) provides instant updates, eliminating time-consuming administration, all of which means you can do more with less and be where and when you're needed the most with your fleet operations under control.
